Magnum Energy Introduces New MMS Series Inverter/Charger

Everett, WA. - Magnum Energy, the leading inverter/charger manufacturer for RV/Marine Industries announces the availability of a new pure sine wave inverter to provide a cost effective solution for customers with smaller power needs in mobile applications. The new MMS1012 has a continuous output of 1000 watts with a 50 -amp charger. The Power Factor Corrected (PFC) Charger uses less energy from a generator than standard chargers - using only 7.5 amps per 50 amps versus 12.5 amps used by standard chargers. The MMS is backed by 24-month parts and labor warranty and is ETL listed to the stringent requirements of UL/cUL458 and CSA C22.2#107.1-01.

Magnum's new inverter/chargers come standard with a 20amp transfer relay, which allows AC power to pass thru inverter while on either shore or generator power. The MMS is fan cooled, enabling the unit to work well in confined spaces. If the inverter does exceed its temperature limits, it will automatically shut down and then restart when it cools down. The unit's small footprint (16.6"L X 8.4"W X 4.7"H) allows easy installation where space is a concern, its modern hourglass case, paired with its diecast aluminum base combines both form and function, creating an attractive unit that uses its base as a heat sink for superior high temperature operation.

ABOUT MAGNUM ENERGY

Magnum Energy, Inc. www.magnumenergy.com is a leading manufacturer of premium inverter/chargers for Mobile, RV, Marine, Off-Grid and Solar applications. With over 80 years of combined inverter design and manufacturing experience, Magnum Energy has incorporated new design and manufacturing techniques to build some of the industries most reliable, advanced and cost effective inverter/chargers and accessories in the world.
