Magnum Releases the Smart Battery Combiner (ME-SBC)

Everett, WA - Magnum Energy is releasing an innovative two-bank battery combiner. It is designed to monitor and charge a second battery using a portion of the current that is charging a main battery. This 25 Amp combiner/isolator integrates an optional solenoid drive, remote voltage sense for more accurate sensing, High and Low battery cut-out to prevent over/undercharging, and automatic 12 or 24 Volt operation.

Connection to the oversized terminals is easy and simple. The basic design makes connecting the SBC as simple as it can get. Like other 3 wire voltage followers, this is a very simple device to connect and setup. The universal controls and connections make this a perfect replacement product.

The remote sense line can be used to monitor the battery voltage of a battery far away or at a charging source. Also, this is used to help minimize unnecessary cycling between combining and isolating, which can lead to early solenoid failure.

List Price of \$129 USD

ABOUT MAGNUM ENERGY

Magnum Energy is a leading manufacturer of premium inverter/chargers for Renewable Energy, Backup Power, RV, Marine and Truck markets. With over 70 years of combined inverter experience, Magnum Energy has incorporated new design and manufacturing techniques to build some of the industry's most reliable and advanced inverter/chargers.
